NHI Console bug sheet: triage and fixes (10 Nov 2026)

84 bugs listed (Bug_002 and Bug_086 have no entry in the source sheet). Fixed: 66, Fixed (redesigned): 10, Needs environment: 2, Not a bug: 6. "Fixed (redesigned)": the screen was rebuilt, so the reported behaviour no longer exists. "Needs environment": the code side is done; it depends on the deployment.

S.No	Module	Bug (as reported)	Status	Comment
Bug_001	Posture	On the Posture page, all clickable elements within the Posture Distribution and Quick Wins sections are non-functional. Clicking on any interactive component (e.g., chart segments, cards, links, or buttons) in these sections does not trigger any action or navigation.-Ambikesh Fixed	**Fixed**	Posture Distribution and Quick Wins segments link to the filtered lists (fixed earlier, re-checked).
Bug_003	Posture	On the Posture page, in the Identities List section, the Refresh button is non-functional. Clicking the button does not reload or update the list data.-Ambikesh Fixed	**Fixed**	Refresh reloads the list with a spinner (fixed earlier).
Bug_004	Posture	Across the entire dashboard, when you scroll down on a page, switch to another page, and come back, the page opens exactly where you left off instead of starting from the top. This is happening on every page of the dashboard and needs to be fixed globally.-Ambikesh	**Fixed**	Every route change scrolls to the top and browser scroll restoration is off (AppShell).
Bug_005	Dashboard	On the Dashboard page, under the Latest API Activity section, clicking the 'All Activity' link redirects to the Activity page. However, the destination page loads scrolled to the bottom instead of starting at the top. The scroll position should reset to the top upon navigation.and same is not working in the Credential exposure section -Ambikesh	**Fixed**	All activity and the exposure links open at the top (same route-change reset).
Bug_006	Alerts	On the Alerts page, in the list section, clicking the Table Settings icon opens a settings menu. However, the Row Density option is non-functional - selecting any density option (e.g., Compact, Standard, Comfortable) does not change the row spacing in the table. when using By identity filter.-Ambikesh	**Not a bug**	The Alerts page no longer exists. Row density works on Identities, Credentials, Exposure and Review the changes.
Bug_007	Identities	On the Identities page, most filters work correctly - selecting a filter updates the list and displays the matching record count. However, when applying the Risk Signals > Holds Credentials filter, no count is displayed, yet the list still shows data. If the count is zero or unavailable, the list should be empty and not display any records-Ambikesh Added EXISTS / NOT EXISTS SQL subquery in repository filter for ho…	**Fixed**	holds_credentials uses EXISTS against identity_credentials (backend, Vishal).
Bug_008	Credentials	On the Credentials page, the search filter is not functioning properly. When a user searches for a record that exists in the list, the search fails to return the matching result.-Ambikesh Expanded ILIKE search query in repository to search across id, name, arn, credential_type, and account_id. Fixed Vishal	**Fixed**	Search covers id, name, ARN, type and account (backend, Vishal).
Bug_009	Exposed Credential	On the Exposed Credentials page, clicking the 'Deep Scan' button opens a modal/container. However, the elements inside the container are not properly aligned. Please fix the layout and spacing to ensure a clean, professional appearance-Ambikesh	**Fixed (redesigned)**	Deep scan drawer rebuilt as a repository list with search; no free-floating form left to misalign.
Bug_010	Alerts	On the Alerts page, when opening the details of any item from the list, the 'Dismiss' and 'Resolve' buttons are non-functional. Clicking either button does not trigger any action.-Ambikesh	**Fixed**	Resolve / Dismiss work for Admin and Analyst. Viewer and Operator see them disabled on purpose (their role cannot change anomalies; the API answers 403).
Bug_011	Activity	On the Activity page, the search bar dropdown opens with an unwanted gap/space between the search bar and the dropdown list. The dropdown should appear directly below the search bar (flush, with no spacing) but currently has visible space separating them.-Ambikesh	**Fixed**	Picker opens 2px under the box as a floating panel (browser-checked).
Bug_012	Activity,NHI, Identites	On the dashboard page, there is a list with pagination. When I switch from page 1 to page 2, the list should start from the top of the page instead of staying at the bottom.-Ambikesh	**Fixed**	The pager brings the top of its list back into view on every page change.
Bug_013	Dashboard	Coupled Scrolling (Filter + List): On pages where a filter panel and a data list share the same screen, scrolling the list also scrolls the filter panel (and vice versa). Both should scroll independently within their own containers.-Ambikesh	**Fixed**	Filter rail scrolls on its own; wheel over it never moves the list (contained scroll).

S.No	Module	Bug (as reported)	Status	Comment
Bug_014	Dashboard	Scroll Chaining (Sidebar → Main Content): When scrolling inside the sidebar and reaching the end, the scroll overflows into the main content area beside it. The sidebar scroll should stop at its boundary without triggering the adjacent page to scroll.-Ambikesh	**Fixed**	Sidebar stops at its ends; no scroll chaining into the page.
Bug_015	Dashboard	The session timeout mechanism on the dashboard is not functioning. The user session does not expire or auto-logout after the configured idle time, leaving the session active indefinitely.-Ambikesh Added last_activity_at tracking column in DB and 30-minute idle session validation middleware to enforce auto-logout. Fixed Vishal	**Fixed**	30-minute idle sign-out (backend middleware + console idle guard).
Bug_016	Login Page	The error message “The username and password do not match an account” appears, and the entered password is cleared automatically.- Ambikesh	**Fixed**	Password is kept and selected after a failed sign-in.
Bug_017	Activity	On the Activity page, when I open the details of an identity and navigate to the "How It Was Used" section, the hover functionality is not working. It appears that the hover behavior, which was previously available, is currently not responding.-Ambikesh	**Fixed (redesigned)**	How it was used is now a read/write bar plus service and action lists, each with values shown; no hover needed to read it.
Bug_018	Integration	On the Integration page, when I click the three-dot menu for any AWS account in the list, the menu does not open. The interface appears to become unresponsive, as if the action is stuck or not being processed. -Ambikesh	**Fixed**	Three-dot menu opens (browser-checked).
Bug_019	Side Bar	On the Dashboard, the Overview section is expanded by default when the page loads. When I navigate to a page under another section, the previously expanded section automatically collapses, which is the expected behavior. However, this behavior is not consistent for the Overview section. The Overview section remains expanded even when I navigate to pages under other sections. Additionally, all other sections have a…	**Not a bug**	Changed on request: Overview is now always open and has no collapse control, so the dashboard links never hide. The other groups stay an accordion.
Bug_020	Integration	When I click "Connect AWS Account" and the "Connect Another AWS Account" wizard opens, I proceed to Step 1 of 3 and then click Cancel.After that, if I click "Connect AWS Account" again, the wizard should restart from Step 1 of 3. However, it reopens at the same step or position where I previously left off instead of resetting to the beginning.-Ambikesh	**Not a bug**	The connect flow is now a 5-step checklist on the page, not a modal wizard. It deliberately remembers completed steps, so console work done in AWS is not lost when the page is left.
Bug_021	Overview> Dashboard	On the Dashboard, under the Identity section, the donut chart is displaying data using only two colors. However, the corresponding donut chart in the Credential tab displays data using multiple colors, making it easier to distinguish between different categories. For consistency and better visualization, the donut chart in the Identity section should use multiple colors similar to the Credential tab when represent…	**Not a bug**	The donut gives each category its own colour; the workspace in the report had only two purposes (Service, Application), so two colours showed.
Bug_022	Overview> Dashboard	On the Dashboard page, when a user clicks the "All Scores" button under the "Where to Start" section, the application should redirect the user to the corresponding section on the Posture page. However, instead of navigating to the relevant Posture section, it redirects the user to the Identity List section of the Posture page.-Ambikesh	**Fixed (redesigned)**	The Where to start panel was removed with the new dashboard design (per the Figma).
Bug_023	posture	On the Posture Management page, within the Identity List section, the search functionality does not work properly when performing a partial search. When I enter a partial keyword or a portion of an identity name in the search bar, the expected matching results are not displayed consistently. The search appears to require an exact match or does not return all relevant results.- Rohit Expanded q search parameter to …	**Fixed**	Partial search across id, name, ARN, type and account (backend, Vishal).
Bug_024	Dashboard	When I am on a page other than the Dashboard Overview (for example, the Identity page), and I click the User Profile icon and select Log Out, the logout process completes successfully.However, after logging in again, the application opens the same page that was active before logout (for example, the Identity page). Instead, the application should redirect the user to the Dashboard Overview page upon successful log…	**Fixed**	Sign-out keeps no return path; the next sign-in opens the dashboard.

S.No	Module	Bug (as reported)	Status	Comment
Bug_025	Credentials	On the Credential page, the cards "Rotation Overdue," "Expiring in 30 Days," and "Orphaned" display a redirect/navigation arrow, indicating that they are clickable. However, when I click on any of these cards or their redirect arrows, no action is performed. The application does not navigate to another page, open a detailed view, or provide any response.-Ambikesh	**Fixed**	Rotation overdue, Expiring and Orphaned tiles filter the list on click.
Bug_026	Credentials	On the Credential page, the filter functionality allows users to select multiple options across different filter categories simultaneously. However, selecting all available filter options results in a very broad search and does not appear to provide meaningful filtering.If the intended behavior is to allow only one selection per filter category, then selecting a new option within the same filter category should au…	**Fixed**	Multi-select within a group combines values; long groups offer Select all / Clear.
Bug_027	Whole dashboard	On the Posture page, within the Identity List section, the filter panel behavior is inconsistent. Closing the filter panel on one page automatically closes the same filter panel on other pages, and vice versa, indicating that the filter state is shared across pages.Additionally, the filter panel state persists after logout and login. If the panel is closed before logout, it remains closed after login; if it is ope…	**Fixed**	Filter rail open/closed is remembered per page for the tab only and cleared on sign-out.
Bug_028	Posture	On the Posture page, under the Identity List section, several column headers such as Failed Checks, Identity, and Change contain ascending/descending sort icons. When a user clicks these sort icons, the list is expected to be sorted based on the selected column.However, the sorting functionality is not working for these columns, and the list remains unchanged after clicking the sort controls.-Ambikesh Registered m…	**Fixed**	Sort keys registered (backend, Vishal).
Bug_029	Identities	On the Identity page, the header section displays a total of 29 Identities. However, when I add up the counts for the individual categories (Publicly Accessible, Unused 90+ Days, and Idle 30+ Days), the total does not equal 29.This creates a discrepancy between the overall identity count and the category-wise counts, making it unclear how the totals are being calculated.-Rohit Updated header summary logic to use m…	**Fixed**	The header now says the views overlap, so their counts do not add up to the total (screen text updated).
Bug_030	Credentials	On the Credential page, when a user selects any option from the sorting filter, the data displayed in the list is not sorted accordingly.Regardless of the selected sorting option, the order of the records remains unchanged, indicating that the sorting functionality is not working as expected.- Rohit Fixed tiebreaker sorting logic in Go repository to respect requested sort direction (ASC/DESC). Fixed Vishal	**Fixed**	Sort direction respected (backend, Vishal).
Bug_031	Dashboard	On the Dashboard page, when the user opens Data Scope, there is only one account available in the Account section, and it is selected by default. However, users can deselect this account, which triggers the following message:"Choose at least one account and one region - an empty scope would hide every figure." Since there is only one available account, allowing users to deselect it creates an invalid state with no…	**Fixed**	The last selected account cannot be unticked.
Bug_032	Integration	On the Integration page, when I open Manage Connections and delete the last connected AWS account or service, the application redirects to the "Connect Your First AWS Account" page.However, this page opens in full-screen mode, replacing the main dashboard view, and there is no Back, Close, or Cancel option available. As a result, users cannot easily navigate back to the previous page or continue using other sectio…	**Fixed**	Removing the last account returns to the Integrations page with navigation available.
Bug_033	Activity page	On the Activity page, clicking the Identity search bar opens a dropdown with two options, but neither option is clickable nor responds to user interaction- Rohit	**Fixed**	Options are clickable and open that identity (browser-checked).
Bug_034	Integrations	On the Integration page, clicking the Connect AWS Account button opens an interface that does not scroll to the bottom, preventing the user from viewing the complete page content and data- Rohit	**Fixed**	The connect checklist is part of the page and scrolls with it (browser-checked).

S.No	Module	Bug (as reported)	Status	Comment
Bug_035	Overview>Dashboard	On the Dashboard page, when I click the "Refresh Figures" button, no action is performed. There is no visible indication that the data is being refreshed, such as a loading spinner, progress indicator, updated timestamp, or refreshed values. As a result, it appears that the button is either non-functional or does not provide any feedback to the user.-Ambikesh	**Fixed**	Refresh figures shows a spinner and a "Figures refreshed" note with the time.
Bug_036	Overview>Dashboard	On the Dashboard page, when I click the Data Scope icon, a configuration panel opens. Under the Regions section, the following message is displayed: "Choose at least one account and one region - an empty scope would hide every figure." However, when I open the panel, all regions can appear deselected, even though the message indicates that at least one region must be selected.If selecting at least one account and …	**Fixed**	The last selected region cannot be unticked; Save is disabled for an empty scope.
Bug_037	Overview>Dashboard	On the Dashboard page, under the "What Needs Attention" section, there are multiple items that display a navigation arrow when selected. Clicking the arrow redirects the user to the relevant page, which is the expected behavior. However, for the "Created Outside Your Normal Process" item, clicking the arrow does not perform any action. The user is not redirected to any page, unlike the other items in the section.F…	**Fixed**	Created outside your normal process links to the shadow-identity list.
Bug_038	Overview>Dashboard	On the Posture Management page, when I open the details from the "Where to Start" section, the cards and content sections within the details panel are not properly aligned or organized. The layout appears cluttered, with inconsistent spacing and positioning of elements.Additionally, similar layout and alignment issues can be observed on other pages within the application. The UI components should be arranged in a …	**Not a bug**	No specific defect given. The Posture detail layout was reviewed; no broken alignment found. Please attach a screenshot if one remains.
Bug_039	Exposed Credential	On the Exposed Credentials page, the All Platforms tab is selected by default. Within this tab, there are five sub-tabs available.When I select any of these sub-tabs, the data displayed in the list changes unexpectedly. The sub-tabs should only filter or categorize the data relevant to the selected tab and should not display inconsistent or unrelated results.The same issue occurs when I switch to another main tab …	**Fixed**	Sub-tab search and filtering corrected (backend, Vishal).
Bug_040	Exposed Credential	On the Exposed Credentials page, when I open the details of a credential and initiate a Deep Scan, the scan takes more than 30 minutes to complete.This prolonged processing time creates a poor user experience and makes the application appear unresponsive and unprofessional. Users may assume that the scan has stalled or failed due to the lack of timely results or progress feedback.-Ambikesh Implemented 30-minute ti…	**Fixed**	30-minute deep scan timeout with a timed_out state (backend, Vishal).
Bug_041	Exposed Credential	On the Exposed Credentials page, when I open the details of a credential and click "Request Deep Scan", the scan starts and the credential enters a running/in-progress state.However, during this time, the "Re-check" button remains enabled and can still be clicked. This may allow multiple scan requests to be triggered for the same credential while a scan is already in progress.The "Re-check" option should be disabl…	**Fixed (redesigned)**	The drawer no longer has a Re-check button; a running deep scan shows its progress only.
Bug_042	Settings > Integrations	When I open the Integrations tab, scroll to the bottom, and click another tab heading, the Integrations page automatically scrolls back to the top. It also seems to happen automatically after staying at the bottom for some time. - Nikitha	**Fixed**	Integrations polls without moving the page; the route-change reset only runs on a new path.
Bug_043	Identities	On the Identities page, when a user clicks "Review the Change", a new page opens. Under the Created tab, the data displayed in the table columns is not properly aligned.The column values appear misaligned, making the table difficult to read and giving the page an unpolished appearance.-Ambikesh	**Fixed**	Review the changes table columns aligned (fixed earlier).
Bug_044	Identities	On the Identities page, when a user clicks "Review the Change", a new page opens. Under the Created tab, the header displays a count of 12 records, indicating that data is available.However, no records are displayed in the table, resulting in a mismatch between the displayed count and the actual data shown on the page.-Ambikesh Updated Counts() repository query to apply identical scan ID and tenant scope filters a…	**Fixed**	Counts use the same scan and tenant filters as the list (backend, Vishal).

S.No	Module	Bug (as reported)	Status	Comment
Bug_045	Identities	On the Identities page, when a user clicks "Review the Change", a new page opens displaying summary cards such as Total Changes, Created, Deleted, and Modified. However, only the Created and Deleted cards can be selected, while the Total Changes and Modified cards are not selectable.Additionally, when a user clicks any of these summary cards, the page should automatically navigate to or highlight the corresponding…	**Fixed**	Every summary card is a filter: Total shows all, Created / Deleted / Modified select their tab. A card with 0 changes is disabled.
Bug_046	Whole dashboard	On the Dashboard, I occasionally encounter an issue where, after opening the details of an identity, account, or other entity and then navigating to another page such as Identity, Credentials, or any other module, the target page appears to be stuck or unresponsive.This issue does not occur consistently, but it happens frequently enough to impact the user experience. The page opens successfully, but some functiona…	**Fixed**	Overlays share one reference-counted scroll lock, so closing a drawer always unlocks the page.
Bug_047	Identities	Across the Dashboard pages, many tables provide both Filter and Table Settings options. However, when the filter panel is opened, the Table Settings option does not function as expected.Additionally, switching between the Comfortable and Compact view modes does not produce any significant or noticeable changes in most tables. As a result, the Table Settings feature provides limited value on these pages.It would be…	**Fixed**	Table settings available on Review the changes; density changes row height; the panel closes after a choice.
Bug_048	Identities	Suggestion-Across the Dashboard pages, the current filter panel design is not providing a good user experience. The filter options are displayed in a side panel/list format, which occupies additional screen space and requires extra user interaction.A more user-friendly approach would be to place the commonly used filters in the page header as dropdowns, chips, or quick-filter controls. This would make filtering mo…	**Not a bug**	Suggestion, not a defect. Logged for design review.
Bug_049	Credentials	On the Credential page, under the Rotation Queue section, clicking on any bar in the chart applies the corresponding filter to the Credential List, which is the expected behavior.However, after applying the filter, the page does not automatically navigate or scroll to the filtered Credential List. Users must manually locate the updated list, which impacts usability. For a better user experience, clicking a bar sho…	**Fixed**	Clicking a rotation-queue row filters and scrolls to the list.
Bug_050	Exposed Credential	On the Exposed Credentials page, when I apply any filter from the filter panel and then switch to another sub-tab, the previously applied filters remain active.The filters should be reset automatically when a user switches between sub-tabs, as each sub-tab represents a different data view. Retaining filters across sub-tabs can lead to confusing or unexpected results.-Ambikesh	**Fixed**	Switching list or platform tab clears the filters.
Bug_051	Exposed Credential	On the Exposed Credentials page, when I click "Scan Full History", a new page opens. In the "Scan a Repository That Has No Findings Yet" section, there are two required fields: Client ID and Repository.When I click the Add button without entering any values, the application displays the message:"Both a client ID and a repository are required."However, if I enter a value in the Client ID field and leave the Reposit…	**Fixed (redesigned)**	The free-text "scan a repository with no findings" form was replaced by picking from the repositories the scanner knows, so there is nothing to mistype.
Bug_052	Exposed Credential	On the Exposed Credentials page, when I click "Scan Full History", a new page opens. If I enter a value in the Client ID field and click Request, the application displays the following error message:"Client ID not found. This client has no scanned repositories on that platform in your workspace."However, the Client ID field appears to accept any random or invalid value without validation. If the entered Client ID …	**Fixed**	Client ID validated against the ledger before a deep scan (backend, Vishal); the form is now a picker (see 051).
Bug_053	Exposed Credential	On the Exposed Credentials page, under the GitHub Likely False Alarms tab, the search functionality is not working as expected.When I enter any id in the search bar, no results are returned, even though matching records are available in the list. The search does not filter or display relevant data based on the entered text.-Ambikesh Expanded search filter in findings repository to cover 8 columns (token ID, identi…	**Fixed**	Search covers 8 columns (backend, Vishal).

S.No	Module	Bug (as reported)	Status	Comment
Bug_054	Integrations page	On the Integrations page When a sync is queued or in progress, no option is available to cancel the ongoing or pending sync operation-Rohit Created new POST /api/v1/aws-integration/accounts/{account_id}/sync/cancel endpoint and service logic. Fixed Vishal	**Fixed**	Cancel sync endpoint and button (backend, Vishal).
Bug_055	Credential page	When the user clicks on the Expires within 30 days filter on the Credential page, the system displays already expired credentials instead of showing only credentials that are going to expire within the next 30 days.- Rohit Added lower bound expires_at > NOW() in SQL filter to exclude already expired credentials from upcoming expiration search. Fixed Vishal	**Fixed**	Already expired credentials excluded (backend, Vishal).
Bug_056	Access Graph	On the Access Graph page, the scrolling and navigation experience is not very intuitive and does not provide a smooth user experience.When the page opens, the focus is placed directly on the graph area. As a result, when I try to scroll using the mouse wheel, the graph zooms in or changes scale instead of scrolling the page. To continue scrolling, I must first move the cursor outside the graph area.A similar issue…	**Fixed**	Plain wheel scrolls the page; zoom is Ctrl/Cmd + wheel, pinch or the zoom buttons.
Bug_057	Behaviour>	NHI Genome On the NHI Genome page, under the "What Is Watched" section, clicking on a segment of the donut chart is expected to update the Departures from baseline-list displayed below with the corresponding data.However, this behavior only works for certain categories, such as Step Functions and Lambda Functions. For the other categories in the donut chart, clicking the chart segment does not update the list, eve…	**Fixed (redesigned)**	NHI Genome redesigned: the What is watched ring now opens the Identities tab on that type, for every type.
Bug_058	Behaviour>	NHI Genome On the NHI Genome page, under the "What Is Watched" section, clicking on a donut chart segment updates the corresponding data in the list below, which is the expected behavior.However, the page does not automatically navigate or scroll to the updated list section. As a result, users may not immediately notice that the data has been filtered or updated.For a better user experience, clicking on any donut …	**Fixed (redesigned)**	Same: a ring segment switches to the Identities tab at the top of the page.
Bug_059	Exposed Credentials	When the user opens a credential's details in the All Platforms tab of the Exposed Credentials page, makes changes, and clicks Mark as Safe, the entire credential table becomes unresponsive and scrolling stops working- Rohit	**Fixed**	Mark as safe closes its dialog and drawer; the shared scroll lock releases the table.
Bug_060	Whole dashboard	The pagination behavior is inconsistent across different pages of the Dashboard.For example, on the Identities page, when a filter is applied and the resulting list contains only 7 records (which is less than the configured page size), the pagination controls remain visible.However, on the NHI Genome page, when a filter is applied and the number of records is less than the page size, the pagination controls are au…	**Fixed**	One rule everywhere: no pager when the list fits on the smallest page.
Bug_061	Behaviour>	NHI Genome On the NHI Genome page, under the "Recently Baselined and Monitored Identities" section, clicking on any item in the list opens a new page.However, the newly opened page does not load from the top. Instead, it opens from the middle of the page, requiring users to manually scroll up to view the page header and initial content.For a better user experience, the page should always open from the top of the p…	**Fixed**	Genome identity pages open at the top.
Bug_062	Operations> Activity	On the Operations → Activity page, when a user clicks on the Identity List dropdown/selector, the page layout becomes distorted. Several UI elements shift from their original positions, causing the page content to appear misaligned and poorly arranged.This results in an inconsistent and unprofessional user experience, as the page structure changes unexpectedly when interacting with the Identity List control.-Ambikesh	**Fixed**	The picker floats over the page; the header does not move (browser-checked).
Bug_063	Dashboard	On the Dashboard page, the Identity and Credential counts displayed in the Over Time summary do not match the counts shown in the latest scan tooltip, showing 61 instead of 58 identities and 566 instead of 559 credentials.- Rohit Added DISTINCT ON (account_id, hour) in trends repository SQL query to eliminate duplicate hourly call counts. Fixed Vishal	**Fixed**	Duplicate hourly counts removed (backend, Vishal). The Over time panel is replaced by Discovery trend.

S.No	Module	Bug (as reported)	Status	Comment
Bug_064	Settings> Integrations	On the Integration page, when I click the Sync button, the synchronization process takes an unusually long time to complete. During this time, the application displays the message This is taking longer than expected. Eventually, the sync operation appears to fail and shows the following message -The scan may still be running; check again in a few minutes.This creates confusion for users, as it is unclear whether t…	**Fixed**	Syncs stuck over 30 minutes are marked failed (backend, Vishal).
Bug_065	Settings> Integrations	On the Integration page, under the AWS Accounts list, when I click "+ Set Up", a new configuration panel/container opens.However, the content within the panel is not properly aligned. Several fields, sections, and UI elements appear misaligned, resulting in a cluttered and unprofessional layout. The spacing and positioning of components are inconsistent, making the setup process difficult to navigate and visually …	**Fixed**	Remediation account setup dialog laid out in labelled sections.
Bug_066	Behaviour>	NHI Genome On the NHI Genome page, under the "Departures from Baseline" section, there are filter options such as Open and All. However, when a user selects any of these filter options, no visible action occurs.The list and related data remain unchanged, making it appear that the filters are non- functional. The same behavior is observed in this section and other similar sections where filter selections do not upd…	**Fixed (redesigned)**	The departures list moved into the Anomalies tab; Open / All switches the list.
Bug_067	NHI Genome	On the NHI Genome page, the table contains a filter for selecting AWS resource types. When the user selects EC2 Instance from the filter, the relevant EC2 Instance data is displayed correctly. However, after applying the filter, the table opens at the middle of the filtered data instead of starting from the top of the table.- Rohit	**Fixed**	Changing a Genome filter brings the list top into view.
Bug_068	NHI Genome	On the NHI Genome page, a table contains a filter for selecting AWS resource types such as EC2 Instance. When the user selects EC2 Instance, the relevant EC2 Instance data is correctly displayed in the table. However, the data displayed above the table also changes after applying the filter.The filter is intended to apply only to the specific table and should not affect other data or components displayed on the pa…	**Fixed (redesigned)**	The Genome table now lives in its own tab, so its filters cannot change the overview figures.
Bug_069		NHI Genome >table >detailed log in the table the "last found" is not matching with the "last seen at" in db the Timestamp is mismatching - Nikitha Validated pre-existing solution in repository layer for anomaly list filtering. solved vikas	**Fixed**	Validated by Vikas: timestamps agree.
Bug_070	Sync now	AWS account sync fails at the Read your AWS accounts stage with a 403 Forbidden - InvalidClientTokenId error while attempting to assume the IAM role NHIPlatformCollector. - Nikitha Added ErrInvalidPlatformCredentials error classification returning 503 with clear message when platform credentials expire. Fixed Vishal Not working	**Needs environment**	InvalidClientTokenId means the API server's own AWS credentials are expired or wrong in that environment. The error is now named clearly; the fix is the deployment's AWS identity, not code.
Bug_071	Whole dashboard	When I click on the User Profile icon and select "Sign In as Another User", I am logged out and redirected to the login page as expecte However, on the login page, if I click the Back button in the browser, I am automatically logged back into the application without any authentication, credential verification, or login validation.This behavior poses a potential security risk, as users should not be able to regain …	**Fixed**	Sign in as another user signs out first, so Back has no session to return to.
Bug_072	Operations> Activity	On the Activity page, under the "Most Recently Active" section, only 8 records are displayed in the list. However, the filter dropdown contains significantly more data and options than what is shown in the list.To improve usability and provide better visibility into the available data, this section should support displaying more records. Additionally, pagination should be implemented to efficiently handle larger d…	**Fixed**	Most recently active is paged (12 per page).
Bug_073	Operations> Activity	On the Activity page, under the "Most Recently Active" section, when I open the details of any item and navigate to the "How It Was Used" section, the bar chart elements are not properly aligned.The chart appears cluttered, with inconsistent spacing and positioning of bars, labels, and related elements. This results in an unstructured and unprofessional appearance, making the chart difficult to read and interpret.…	**Fixed (redesigned)**	Same as 017: the chart was replaced by aligned bars and lists.

S.No	Module	Bug (as reported)	Status	Comment
Bug_074	Settings > Integrations	On the Integration page, under the AWS Accounts list, when I click "View and Manage", a new configuration panel opens.However, after selecting an AWS Account and a Service and then clicking the Check button, the validation/check process fails and does not complete successfully.This prevents users from verifying the selected account and service configuration.-Ambikesh Updated connection check from iam:ListRoles to …	**Needs environment**	Check uses sts:GetCallerIdentity (backend, Vishal). Remediation validate code updated from the ISPM build; needs the remediation role deployed in the customer account to pass.
Bug_075	Overview> Dashboard	On the Dashboard page, there are four metric cards displayed at the top. In two of these cards, graphical indicators are shown at the bottom; however, they do not have any labels, legends, or tooltips explaining their purpose.As a result, users cannot easily understand what these indicators represent or how they relate to the displayed metrics. This reduces the clarity and usability of the dashboard.For better use…	**Fixed**	The growth lines were removed from the KPI cards; the remaining meters carry a label and percentage.
Bug_076	Overview> Dashboard	On the Dashboard page, there are four cards. Three of these cards support a navigation action, allowing users to click and be redirected to a relevant details page.However, the "Created Outside Your Normal Process" card does not provide the same functionality. Clicking on this card or its navigation arrow does not redirect the user to any page.For consistency and a better user experience, the "Created Outside Your…	**Fixed**	The card (now "Without an owner") links to the shadow-identity list.
Bug_077	NHI Genome	The "What is Watched" card count does not match the DB count. The database shows 36 total identities (active + inactive) and 17 active identities across the specified identity types. Please verify the dashboard counting logic and status filters. - Nikitha Fixed vikas	**Fixed**	What is watched counts the genome list itself and states active and other-status counts.
Bug_078	Inventory> Identities	On the Identity page, when I select the "Unused 90+ Days" tab, the list contains only identities of type EC2. However, when I apply additional filters, the same data continues to be displayed even when the selected filters should exclude those records.If the applied filters do not match the available data, the list should be updated accordingly and display only the relevant results, or show an empty state if no ma…	**Fixed**	Owner and VPC filters case-insensitive (backend, Vishal).
Bug_079	Inventory> Identities,Credentials	On the Credential page, when I click the Table Settings icon, the dropdown panel does not open properly when there is limited space below the header. Portions of the menu may be hidden or difficult to access, affecting usability.Additionally, when a user selects an option from the Table Settings menu (such as a view preference), the dropdown should automatically close after the selection is made. This is a standar…	**Fixed**	Settings panel positions itself in the space available and closes after a choice.
Bug_080	Inventory> Credentials	On the Credential page, when I click "See What Changed", a new page opens displaying tabs such as Modified. The Modified tab shows a count of 1, indicating that one record is available.However, when I select the Modified tab, no data is displayed in the list. At the same time, if I use the dropdown filter and select Credentials, the filter shows a count of 2 records, creating a mismatch between the tab count and t…	**Fixed**	Counts and pages use the same filters (backend, Vishal).
Bug_081	Posture management	On the Posture Management page under the Checks tab, multiple filter options are available to filter the displayed checks. However, only the "Least Privilege" filter is working as expected. When selecting any of the other available filter options, the results are not displayed according to the selected filter criteria. This indicates that the filter functionality is not working correctly for most of the available …	**Fixed**	Fixed now: the pillar filter compared the stored code exactly, so only pillars spelled like the filter value matched. It now compares normalized codes.
Bug_082	NHI Genome>recently baselined	In recently baselined card, clicking on any Identity opens detailed page wherein on top there is a "Open in Inventory" redirects to the Identity Tab their from the detailed Identity page it takes the same "identity_name" into the search filter where it doesn't take the "arn" infront of the identity name thats the reason its not matching with any of the identities. - Nikitha	**Fixed**	Fixed now: Open in inventory and Identity record use the identity_name the identity summary resolves (the ARN), not the monitoring key from the Recently baselined link.
Bug_083	Posture management	On the Posture Management page under the Checks tab, the Pass and Fail filter options are not working as expected. When selecting either the Pass or Fail option, the displayed check records are not filtered according to their respective result status. The page should display only the records matching the selected filter.-Rohit	**Fixed**	Fixed now: Failed / Passed matched only FAIL / PASS in capitals; FAILED, PASSED and lower case now match too.

S.No	Module	Bug (as reported)	Status	Comment
Bug_084	NHI Genome>what is watched card	As there are two identities need to mention either "Glue job and crawler" or both separately or "Glue functions". - Nikitha	**Fixed**	Fixed now: Glue jobs and crawlers count as "Glue components".
Bug_085	Operations> Remediation	On the Operations → Remediation page, when I navigate to the page, I encounter the following error message"The plans waiting for approval could not be read. The service failed while handling this request. (HTTP 500)"This error prevents the page from loading the Plans Waiting for Approval data and indicates a server-side failure. As a result, users are unable to view or manage the remediation plans that require app…	**Fixed**	Fixed now: remediation backend updated from the ISPM build; the waiting-for-approval list loads (checked for every role).
